Project Title: Percentage calculator

Task Description

Develop a percentage calculator in Java with a simple graphical user interface (GUI).

Implement functionalities to calculate percentages, percentage increases/decreases, and find the whole given a part and percentage. Allow users to input values and select the desired calculation type. Include error handling for invalid inputs and provide clear instructions for use. Ensure the code is clean, modular, and well-documented for easy maintenance. Optimize for accuracy and performance. Test thoroughly to ensure all calculations are correct and reliable. Provide detailed documentation for usage and future updates.
